

Pronghorn Antelope Response Data Summary

License Year 1997

Harvest Surveys

Montana Fish Wildlife and Parks

October 20, 1999

This report contains summaries of license year 1997 (LY97) pronghorn antelope hunting and harvest survey response data based on responses returned from random samples of antelope license holders. Montana residents were surveyed primarily by phone, while non-residents were surveyed by mail. The population of 24,584 Montana resident antelope license holders was sampled to generate 14,688 contact labels, for an overall sample rate of 60%. From these, 10,571 survey responses were returned and used in the analysis, for a resident return rate of 72%, and an overall response rate of 43%. The population of 5,519 non-resident antelope license holders was sampled to generate 3,920 contact labels, for an overall sample rate of 71%. From these, 1,722 survey responses were returned and used in the analysis, for a non-resident return rate of 44%, and an overall response rate of 31%.

Antelope response data is summarized by location (statewide, regional, and by hunting district) and by residency (Montana residents, non-residents, both combined). Antelope response data is not summarized down to individual License/Permit level in this report. The response data set alone does not contain this information. Also, these summaries do not present expanded statistical estimates of hunting effort or harvest success. Complete Antelope response data analysis requires information from additional data sets (Sportsperson/License Database, Quota and Regulations Database) and further data manipulations. These steps have not yet been completed. This report just summarizes the information contained in the response data set.

Given these limitations, summaries of response data can provide useful information. Relevant hunting and harvest ratios such as percent hunting and percent success are unaffected by statistical expansion, as are percent harvest by sex-age class or time period of kill. Though summaries to License/Permit Type are not possible from response data alone, by viewing district level response information, in the light of knowledge of the management use of the License/Permit Types valid within the district, it is sometimes possible to deduce hunting and harvest to License/Permit level.

The following LY97 Antelope Response Data Summary tables are presented:

- **General Respondent Data**
- **Hunter Effort and Success**
- **Hunter Effort Data**
- **Hunter Success and Kill by Sex-Age Class**
- **Hunter Success and Kill by Time Period**

Montana State Library

LY97 Antelope Response Data Summary, General Respondent Data

This summary is derived from the two most basic questions asked during the Antelope survey:

- Did you actively hunt for antelope?
- If so, how many antelope did you harvest?

Res = Residency class. N=non-residents, R=residents, All=both residency classes.

Cons Pfx = Conservation Prefix. These are the 2 digit codes the Licensing Section assigns to various types of conservation licenses sold. All antelope license holders must also hold a conservation license. All = all prefixes combined.

Responding Sports = Number of sportspersons returning responses.

Responding Hunters = Number of responding sportspersons reporting active hunting.

Responding Successful = Number of responding active hunters successful in harvesting one or more Antelope.

Reported Harvest = Number of Antelope harvested by successful Antelope survey respondents.

Percent Hunting = Ratio of active hunters to responding sportspersons * 100. Percent of Antelope license holders that actually went hunting.

Percent Success = Ratio of successful hunters to active hunters * 100. Percent of active hunters succeeding in taking one or more Antelope.

Holders To Kill = Ratio of responding sportspersons to reported harvest. An estimate of number of license/permit holders required to harvest an Antelope.

Kill Per Hunter = Ratio of reported harvest to active hunters. An estimate of the average number of Antelope harvested per active hunter.

Kill Per Successful = Ratio of reported harvest to successful hunters. An estimate of the average number of Antelope harvested per successful hunter.

Throughout this report, missing or undefined data is indicated by using a -9.

A very faint, large watermark-like image of a pronghorn antelope is visible in the background. The animal is standing, facing left, with its characteristic long, thin horns. It is set against a light, textured background that suggests a natural landscape.

LY97 Antelope Response Data Summary, Hunter Effort and Success

This summary is derived by combining Antelope survey responses from the effort questions asked of active hunters:

- In which district(s) did you hunt Antelope?
- How many days did you spend hunting for Antelope in each district?

with the success question regarding harvest:

- How many antelope did you harvest?

Loc = Location. STA=Statewide, R01..R07 = Region (R09 = Unknown), ###=Antelope hunting district.

Res = Residency class. N=non-residents, R=residents, All=both residency classes.

Responding Hunters = Number of responding sportspersons reporting active hunting.

Responding Successful = Number of responding active hunters successful in harvesting one or more Antelope.

Reported Harvest = Number of Antelope harvested by successful Antelope survey respondents.

Hunter Days = Sum of hunter days reported by responding active hunters.

Percent Success = Ratio of successful hunters to active hunters * 100. Percent of active hunters succeeding in taking one or more Antelope.

Kill Per Hunter = Ratio of reported harvest to active hunters. An estimate of the average number of Antelope harvested per active hunter.

Kill Per Successful = Ratio of reported harvest to successful hunters. An estimate of the average number of Antelope harvested per successful hunter.

Days To Harvest = Ratio of hunter days to reported harvest. An estimate of the average number of hunter days required to harvest an Antelope.

Tables are presented at the Statewide and Regional level, then at the Hunting District Level.

If there were no successful respondents within a location and residency class, then columns relating to hunting success will be blank.

LY97 Antelope Response Data Summary, Hunter Effort Data

This summary is derived from the survey questions asked of active Antelope hunters:

- **In which district(s) did you hunt Antelope?**
- **How many days did you spend hunting for Antelope in each district?**

Loc = Location. STA=Statewide, R01..R07 = Region (R09 = Unknown), ###=Antelope hunting district.

Res = Residency class. N=non-residents, R=residents, All=both residency classes.

Responding Hunters = Number of responding sportspersons reporting active hunting.

Districts Hunted = Sum of number of individual hunting districts where hunters reported Antelope hunting. This is only meaningful at the Statewide and Regional levels.

Hunter Days = Sum of hunter days reported by responding active hunters.

Districts Per Hunter = Ratio of districts hunted to responding hunters. An estimate of the average number of districts hunted by an individual Antelope hunter. This is only meaningful at the Statewide and Regional levels.

Days Per Hunter = Ratio of hunter days to responding hunters. An estimate of the average number of hunter days per individual Antelope hunter.

Days Per District = Ratio of hunter days to number of districts hunted. An estimate of the average number of days an individual hunter spends hunting in a single district. This is only meaningful at the Statewide and Regional levels.

Tables are presented at the Statewide and Regional level, then at the Hunting District Level.

LY97 Antelope Response Data Summary, Hunter Success and Kill by Sex-Age Class

This summary is derived from survey questions asked of successful Antelope hunters. For each of up to three kills, the following questions were asked:

- In which district did you kill your Antelope?
- What was the sex-age class? (U=Unknown, Y=Fawn, F=Doe, M=Buck)

Loc = Location. STA=Statewide, R01..R07 = Region (R09 = Unknown), ###=Antelope hunting district.

Res = Residency class. N=non-residents, R=residents, All=both residency classes.

Responding Hunters = Number of responding sportspersons reporting active hunting.

Reported Harvest = Number of Antelope harvested by successful Antelope survey respondents.

Kill Per Successful = Ratio of reported harvest to successful hunters. An estimate of the average number of Antelope harvested per successful hunter.

Reported Unknown = Number of unknown sex-age class harvested by successful Antelope survey respondents.

Reported Fawn = Number of fawn sex-age class harvested by successful Antelope survey respondents.

Reported Doe = Number of doe sex-age class harvested by successful Antelope survey respondents.

Reported Buck = Number of buck sex-age class harvested by successful Antelope survey respondents.

Pcnt Unkn = An estimate of the percent harvest of unknown sex-age class.

Pcnt Fawn = An estimate of the percent harvest of sex-age class fawn.

Pcnt Doe = An estimate of the percent harvest of sex-age class doe.

Pcnt Buck = An estimate of the percent harvest of sex-age class buck.

Tables are presented at the Statewide and Regional level, then at the Hunting District Level.

LY97 Antelope Response Data Summary, Hunter Success and Kill by Time Period

This summary is derived from survey questions asked of successful Antelope hunters. For each of up to three kills, the following questions were asked:

- In which district did you kill your Antelope?
- In what time period did you kill your Antelope? (U=Unknown, 1=Pre-season, 2=Week 1, 3=Week 2, 4=Week 3, 5=Week 4)

Loc = Location. STA=Statewide, R01..R07 = Region (R09 = Unknown), ###=Antelope hunting district.

Res = Residency class. N=non-residents, R=residents, All=both residency classes.

Reported Harvest = Number of Antelope harvested by successful Antelope survey respondents.

Time Unkn = Number of harvested during an unknown time period by successful Antelope survey respondents.

Pre-season = Number of harvested during the pre-season time period by successful Antelope survey respondents.

First Week = Number of harvested during the first week of the general season by successful Antelope survey respondents.

Second Week = Number of harvested during the second week of the general season by successful Antelope survey respondents.

Third Week = Number of harvested during the third week of the general season by successful Antelope survey respondents.

Fourth Week = Number of harvested during the fourth week of the general season by successful Antelope survey respondents.

Pcnt Pre = An estimate of the percent harvest during pre-season.

Pcnt Wk 1 = An estimate of the percent harvest during week 1 of the general season.

Pcnt Wk 2 = An estimate of the percent harvest during week 2 of the general season.

Pcnt Wk 3 = An estimate of the percent harvest during week 3 of the general season.

Pcnt Wk 4 = An estimate of the percent harvest during week 4 of the general season.

Tables are presented at the Statewide and Regional level, then at the Hunting District Level.
